

# Catering Reservation and Ordering System

This is a full-stack Catering Reservation and Ordering System built using the MERN stack (MongoDB, Express.js, React.js, Node.js).

This system allows users to register, login, browse available dishes, place orders, and view order history.

Admins can manage dish listings and monitor incoming orders.

## Key Features:

- User Registration and Authentication with JWT
- Role-based login (Admin/User)
- Product upload with provider info
- Product listing and order placement
- My Orders view
- Admin panel to view orders made on their products

## User Credentials (for demo):

- raj / 123456
- rahul / 123456
- Vishwa / 123456

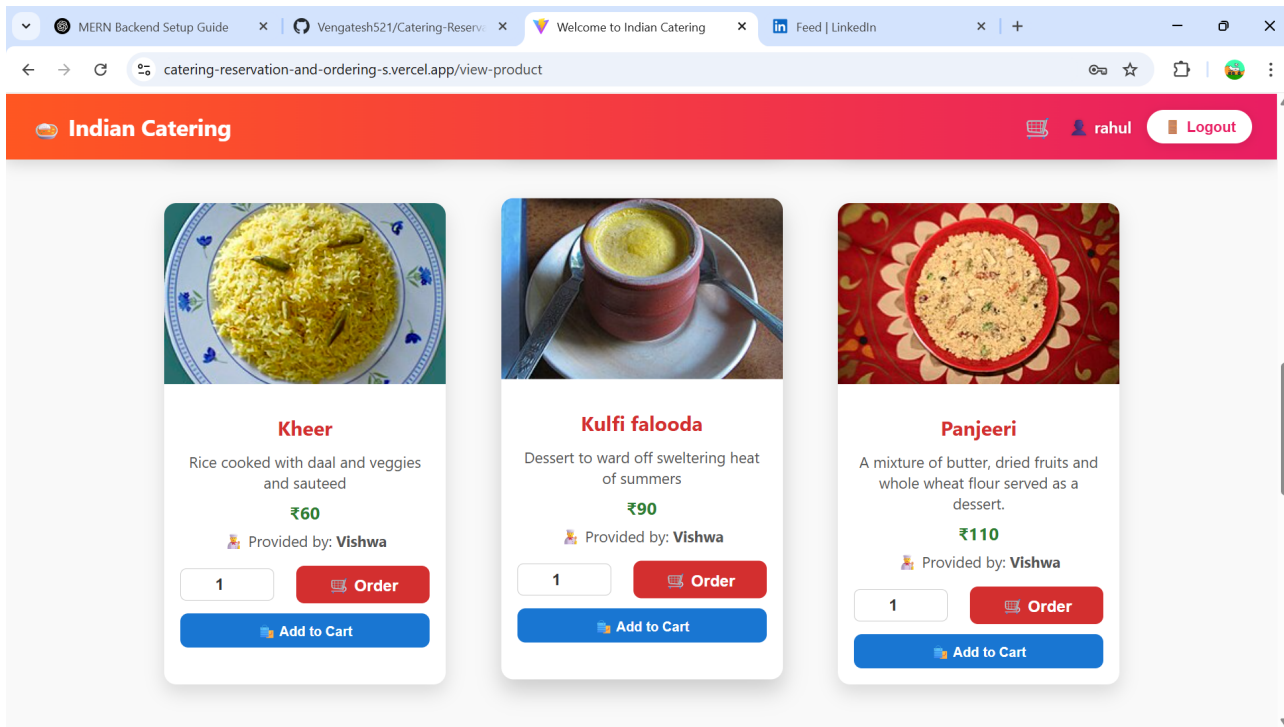

## GitHub Repository:
